

ECOMar is able to treat grey and black water in compliance with international standards and to render it dischargeable directly into the sea, without solid residues.

The chemical-physical reactions inside disinfect the water and reduce the sediment dimensions so that the water becomes clear and odorless and can be discharged directly overboard. At the end of every cycle takes place an automatic washing of the tank with clear sea water.

ECOMar is built with a central body made in strong polypropylene mounted on a steel chassis. Stainless steel treatment tank is available on request. The LCD electronic control panel with microprocessor manages all the functions of the system, automatically. Very low electric power consumption.

The system can also work in emergency mode.

MAIN ADVANTAGES:

- POLLUTION FREE: the disinfectant liquid does not release poisonous substances
- NO RESIDUALS ON BOARD: consequently the installation of a sludge tank is not required

- EASY TO USE: totally automatic with possibility to operate it manually in emergency
 - COMPACT: designed to work in small engine rooms
 - VERSATILE: available at 24V DC and 230/400V AC
- Other voltages and frequencies available.
